

DataArchiva™

## Release Notes

### Version 3.17

---

## Features

DataArchiva version 3.17 has come up with the following feature.

### Feature #1

**Import/Export:** DataArchiva has come up with a new feature of Import/Export using which the DataArchiva configuration done in one Org can be moved to another Org. This feature will help business in terms of deployment from their Sandbox environment to Production environment

### Feature #2

**Audit Configuration:** Users can now select the events of DataArchiva for which it needs to be audited.

## Enhancements

DataArchiva version 3.17 has come up with the following enhancement.

### Enhancement #1

**Audit Events:** DataArchiva has added more events to be audited which will help business to track the activities around Archiving

### Enhancement #2

**Salesforce Detail page load optimized:** The Salesforce record detail page where DataArchiva related list component is placed will load faster since the loading of the DataArchiva related list component will not hold the loading of Salesforce detail page
