

DataArchiva™

Release Notes

Version 3.18

Enhancements

DataArchiva version 3.17 has come up with the following enhancement.

Enhancement #1

Failure Email Notification: The failure email notification will now have the record ID of the failed record as well which will help business to debug issue faster

Enhancement #2

Files/Attachments: Files and Attachments related list on DataArchiva archived record detail page will have the same column as standard related list of Salesforce.

Enhancement #3

Delete Batch size: Now customers can specify the batch size under Manage configuration->Archive Policy->Settings for deletion process of Archive based on which the records to be deleted will be divided into different batch based on the size mentioned. Please check the below screenshot for reference
