DataArchiva Release Notes

Version 3.0

DATE <07-12-2018>

New Release Features

DataArchiva version 3.0 is coming up with following new features.

Feature #1

DataArchiva along with the new extension package of DataConnectiva offers a user a data archiving solution where their Salesforce data can be archived outside of the Salesforce ecosystem.

Users can now archive their Salesforce data in any of their preferred cloud database platform service providers or any on-premises storage systems.

Feature #2

DataArchiva now comes with a new tab called 'APP SETTINGS' which will help admins configure DataArchiva settings including configurations like whether a user using DataArchiva can restore, archive, preview or not.

Enhancements

Following enhancements have been done for some of the current DataArchiva features.

Enhancement #1

Label changes will be skipped in metadata sync (to support translation).

Enhancement #2

Supports PersonAccount.

Enhancement #3

Enhanced to support legacy EmailMessage's HtmlBody (as attachment).

Fixations

Following fixations have been done for some of the current DataArchiva features.

Fixation #1

DataArchiva detail page will not be dependent on big object's field labels.

Fixation #2

DataArchiva detail page supports previewing of record if the object has single quote in its label and/or name field.

Note: Along with these fixations we have also fixed 40+ bugs which were tracked during the QA process

Upgrade Process

1. Customer using DataArchiva version 2.x can directly get their product upgraded to 3.0 from AppExchange.

2. Customer using DataArchiva version 1.x to get their product upgraded need to contact support@dataarchiva.com as this would require manual schema correction

Known Issues and Problems

No known issues were found
