

DataArchiva

Release Notes Version 3.4

Release Notes

[DataArchiva]

Release Features

DataArchiva version 3.4 is coming up with the following new features.

Feature #1

DataArchiva now comes with a new tab called 'Field Audit Trail'. Using FAT users will be able to archive audit trail data of all the objects. With this feature available in DataArchiva, users need not required to buy the FAT addon that Salesforce is providing for backing up the field audit trail data.

Feature #2

DataArchiva is now providing with the option of Hard Delete. To enable this feature user need to go to Manage(of any configured object)-> Archive policy -> Settings.

When this feature is enabled during Archiving it will delete the Archived records from Recycle bin.

Enhancements

Following enhancements have been done for some of the current DataArchiva features

Enhancement #1

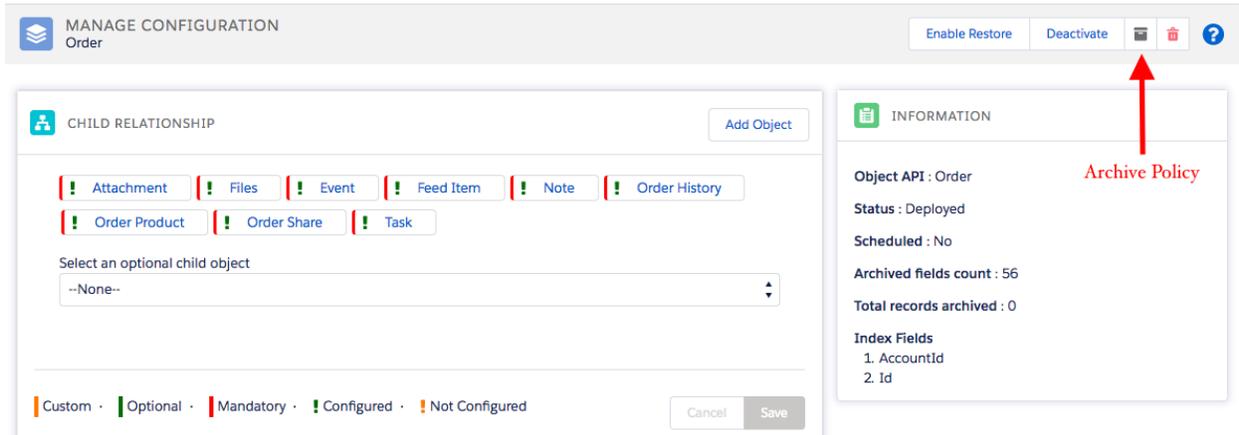

Supports archiving of Asset's share records.

Enhancement #2

Schedule, Filter and Setting are all clubbed in Archive Policy. Its available in Manage (of any configured object) -> Archive Policy

Release Notes Version 3.4

Fixations

Following are the fixations which we have done in some of the current features

Fixation #1

Find page earlier used to show maximum 16 archived records. Now it will show all the archived records of the object.

Fixation #2

Earlier in currency field or percentage field for data like 100 the preview used to display 1E+2. Now it's fixed and in preview actual data i.e. 100 is displayed.

Note: Along with these fixations we have also fixed other 30+ bugs which were tracked during the QA process

Known Issues and Problems

No known issues found.
