DataArchiva Release Notes
Version 3.5

Release Notes

[DataArchiva]

Release Features

DataArchiva version 3.5 is coming up with following new features.

Feature #1

DataArchiva now comes with new tab 'Field Audit Trail'. Using FAT user will be able to archive audit trail data of all the objects. With this feature available in DataArchiva user need not required to buy the FAT addon that salesforce is providing for backing up the field audit trail data.

Feature #2

DataArchiva is now providing with the option of Hard Delete. To enable this feature user need to go to Manage(of any configured object)-> Archive policy -> Settings.

When this feature is enabled during Archiving it will delete the Archived records from Recycle bin.

Feature #3

Archive Batch size. Now DataArchiva Admin can control the Archive job batch size object level instead of ORG level

For each object configured in DataArchiva Admin can set the Batch size

To set the batch size Admin needs to go to Manage(of any configured object)-> Archive policy -> Settings.

Version 3.5

Fixations

Following are the fixations which we have done on some of the current features

Fixation #1

Earlier in currency field or percentage field for data like 100 the preview used to display 1E+2. Now it's fixed and in preview actual data i.e 100 is displayed.

Note: Along with this fixes we have also fixed 30+ bugs which were tracked during QA

Known Issues and Problems

No known issues found.
